Seoul Fintech Lab

The Korean Cradle of Fintech Startups
Created by Seoul Metropolitan Government

Seoul Fintech Lab is a fintech startup supporting institution, which is fully funded by Seoul Metropolitan Government to provide an incubating and accelerating program. We are providing customized support for the various needs of fintech start-ups and offering office space up to 3 years.

It was established in 2018 and is located at Yeoui-do, Seoul in order to promote global competitiveness of fintech start-ups and to utilize financial hub of the area. Starting with 14 startup support in 2018, we have continued to grow in size with 100 startup support as of 2021, and we plan to continue to expand.

MOUDA MOUDA

P2P lending and investment service for medical professionals

Our Service

Mouda is the first and only online South Korean financial platform which specializes in the medical sector. Established in June 2016, we have lent over KRW 58 billion to hundreds of clinics and hospitals, helping medical professionals provide better services to patients. In August 2021, Mouda completed registration at the Financial Services Commission according to the Act on Online Investment-Linked Financial Business and the Protection of Users. By following its motto, "connect healthy investors with healthy clinics", Mouda continues its journey beyond just a medical financial platform to a total medical platform.

Project status and performance

Mouda has developed a novel credit scoring system specialized in the medical sector, 'M-Score', utilizing such data as establishment and close down of all domestic clinics and hospitals, sickbed counts, number of medical doctors, major treatment items, which has resulted in the overall loss rate of 0.7% out of its five-year cumulative amount of unsecured P2P lending of 58 billion Korean Won. Beginning from the launching of 'Doctors' Club', Mouda's membership service for medical professionals, in November 2021, Mouda plans to expand its business to total medical platform by consolidating its network with medical doctors.

Our Service

In July 2021, Winkstone fourth registered online investment-linked financing company in Korea to provide investment products that are easy and convenient for mass and mass affluent through online platforms, while providing loan products with reasonable interest rates to small and medium-sized businesses that do not receive sufficient supply at the right time from existing financial institutions, even though they are superior or growing.

Project status and performance

Since established in December 2018, we has been executed 50 billion KRW cumulative loan in June 2020 and has maintained a delinquency rate of 0% without write-off non-performing debts for more than 65 billion KRW runs. Among the cumulative executions, small and medium-sized enterprise unsecured loan products account for about 37.4 billion KRW, and we are establishing a credit scoring model that evaluate repayment capacity and bond management system that can reliably execute and manage loans by identifying factors. Credit scoring model can evaluate repayment capacity that can provide loans to marginalized in the financial markets.

Our Service

Modern people living in a hyper-connected society are able to access information and other people 24 hours a day, transcending temporal and spatial limits. On the other hand, human communication skills and opportunities are gradually fading, which is why we are obsessively drawn to the endless connections that technology has made. By constantly looking at your smartphone, you can easily get the latest information and relationships through various SNS. I can't get away from my smartphones and social media for even a moment as if I'm caught up in a compulsion, but there's no way to hide the negative points of being lonely and lonely for some reason. Although they show endless interest in the 'posts' or 'reactions' of other people on their smartphones, there are many cases where they do not give a proper glance to their family, friends, or colleagues who are eating together. The more you connect with the world, the more you isolate yourself. The era at your fingertips. A hyperconnected but empty era. There must now be a way to truly empathize with each other and to care for each other. The IT-based hyper-connected world cannot be reversed, so we have to find a way back in it. We are looking for a way to make it happen. Real Connected Society, a space where you can genuinely empathize and exchange hearts! We will make that space. We hope to fill that space with warm air together.

Pre Series A

Websitewww.finhaven.com**Inquiry**hello@finhaven.com**Our Service**

Finhaven is developing a capital market infrastructure (the Finhaven Investment Platform) for digital securities and currencies with the vision of integrating global capital markets. The platform leverages blockchain technology and covers KYC, AML, Suitability, Capital Raise, Primary Distribution, Marketplace, Settlement, Depository, Investor Relations, and Corporate Action Management. The Finhaven Investment Platform stands on the Finhaven Distributed Network (FDN). The FDN is composed of Private Markets (PM) and Public Markets (P2).

Finhaven Capital Inc. (FinCap), a wholly owned subsidiary of Finhaven, opened Finhaven Private Markets on the Finhaven Investment Platform in Canada. After undergoing a rigorous review process with the Canadian Securities Administrators with the British Columbia Securities Commission as its principal regulator, FinCap has been authorized as an Exempt Market Dealer (EMD).

Project status and performance

FinCap also received marketplace authorization and clearing agency exempt relief in November 2020. In January 2021, FinCap opened Finhaven Private Markets based on the regulatory authorizations that FinCap acquired. Finhaven Private Markets is a digital market that directly connects issuers to investors, as well as investors to investors. Finhaven has been engaged in multiple discussions to license the Finhaven Investment Platform to other market participants.

Ticker Capital

Ticker Capital is a fund focusing on early-stage blockchain technology investment, consulting and acceleration. Since 2018, Ticker Capital has formed long-term partnerships with top investors/incubators/developer communities in China, South Korea, Singapore, Israel, South East Asia and North America.

Our Service

Ticker Capital provides professional consulting and marketing services to teams plan for business globalization, besides existing investment and accelerating service sectors. Ticker Capital plans to launch a new service platform for better service the needs of cross-boarder e-commerce businesses.

ReachQ is a one-stop solution, utilizing blockchain technology, that can provide more accessible and transparent data in the field of KOL marketing.

Directional DIRECTIONAL

Blockchain based Securities Borrowing & Lending Platform

Our Service

Currently a few third-party brokerages centralize the SBL market, thus retail lenders do not receive a true value for their loaned securities while retail borrowers have very limited access on lending pool. However, Directional platform offers the equal opportunities to all the participants for lending and borrowing securities at fair market prices. Retail lenders can have a fair compensation and retail borrowers can secure more balanced investment opportunities using short-selling strategies.

Our Service

DA Ground is a fintech start-up that creates a new financial system suitable for the new-normal era that will eventually substitute traditional finance. Our mobile app, 'Sandbank', is providing a unique financial service to 6 million digital asset investors in Korea, allowing them to receive stable returns on their digital asset investments. The major trend in digital asset investment in Korea is to buy and sell in a short term, which is very risky. With Sandbank, investors can generate stable and compounding returns on their digital assets in a long term and effectively prepare for the current economic condition where low-interest rates and high asset inflation are evident. Sandbank makes a profit out of clients' assets by portfolio management such as loaning them out to institutions or by running a number of quantitative trading strategies. Sandbank aims to improve people's daily investment experience by providing a comprehensive asset management platform.

Project status and performance

Unlisted stock trading platform, Seoul Exchange Unlisted

Our Service

PSX develops a trading platform that allows you to buy and sell unlisted stocks.

Under the name of 'Seoul Exchange unlisted', the official service has been provided since the end of December 2020.

It has been designated as an innovative financial service by the Financial Services Commission, and enables safe transactions of unified stocks through the opening and connection of non-face-to-face accounts of Shinhan Financial Investment.

In addition, it provides an immediate signing service that can be traded for less than 100,000 won , and provides encyclopedia service that can grasp unlisted company information at a glance.

We are continuously researching and developing services so that customers can use them more easily.

Project status and performance

The Seoul Exchange Unlisted has been recognized for its business purpose and technical innovation to lower the trading barriers of stocks.

As a result, it was designated as an innovative financial service by the Financial Services Commission in April 2020 and became a service to broker unlisted stocks with legitimate permission.

By introducing a safe transaction function using blockchain technology and the industry's first immediate signing function, unlisted stocks can be traded conveniently, and research is underway on the transaction of unified stock certificates that cannot be transferred.

PSX is currently attracting 3.5 billion won in investment and aims to induce market capital flow to areas with future vision and technology that help form the country's real economy or value-added.

We are fighting against Issues of Information society such as Voice Phishing and leakage of private Information, by using Information Communication technology.

Our Service

1. Anti-Scam: Anti-Scam analyzes big data related to fraud on the Internet and fraud data that reported to financial institution based on the registered patent.

Through the analysis, it helps preventing fraud by providing services such as 'Notification of the latest & major types of fraud', 'warning suspicious phone call', 'Family protection notification', 'detection of malicious or remote control app' and 'Compensation insurance of Phishing hacking'.

2. Autocall: A service that prevents damage such as voice phishing, smishing, spam, that can occur when the driver's contact number is displayed on the parking license plate. Though the Autocall, it is possible to call diver by entering the vehicle number on the visible ARS screen, instead of using private phone number.

3. MFinder: MFinder minimize the risk of personal information leakage due to cell phone loss and also maximize the possibility of finding cell phone through remote camera control, auto video call, accurate location tracking system and beep alert system that works in silent mode.

Project status and performance

- 1. Sales :** Sales in 2020: about 5.2 billion won
- 2. Intellectual property rights:** Patent registration: a total of 8 cases / Patent applications: a total of 3 cases / Trademark registration: a total of 3 cases
- 3. Employment status :** When moving into Seoul Fintech Lab in October 2019, the number of people: 5 / as of October 2021, the number of employees: 24
- 4. Business results**
 - 1) Current status of major partnership contracts in 2021.
- 5. Performance such as award**
 - 1) DataUniverse won the 2021 4th Industrial Revolution Best Corporate Public Administration and Security Minister Award.
 - 2) MFinder won the 2021 Korea Mobile Grand Prize in Startup Security.
 - 3) MFinder Awarded for the "2021 16th Digital Innovation Grand Prize IT/SW".
 - 4) Anti-Scam 'Korea Fintech Week 2021 Voice Phishing Experience Technology'

RALFKAIROS is a cybersecurity startup located in France and Korea

Our Service

With my associate Marc de Supervielle, we have created RALFKAIROS, the only european cybersecurity company in Korea.

RALFKAIROS is a cybersecurity startup located in France and Korea since 2015 providing:

- Information security audit
- Consulting like CISO assistance, audit, business continuity plan, data privacy assessment, OS hardening, remediation after compromise,
- Cybersecurity training for reskilling IT managers, awareness for employees, advisory and consultancy for executives on cybersecurity risk (official PECB training reseller for Korea).

We are certified professionals from ISACA and ISO 27001, with more than 20 years in IT security and participate or organize many events in Cybersecurity for Asian market : Polish-Korean Business Week in Korea, Data Privacy in Korea, the-Importance of Secure Digital Transformation for European chamber of Commerce in Korea etc...

RALFKAIROS customers are corporates in Finance, Luxury, Telco, Logistic, Defense but also startups with cloud IT systems in Asia and Europe.

Based on our strong experience in security audit for enterprises, we have created NamiSEC, a precheck compliance assistant for Fintech companies applying at Open Banking licence.

NamiSEC is a complete framework to identify quickly necessary information required by Korean regulator.

After analyzing data, NamiSEC represents in a simple picture that can be understood by a non professional the status of the finance security compliance rules. The Fintech companies can save time for their go-to-market and have a better chance to improve their security maturity.

We target all Fintech companies that apply for any government licence with security verification, that represents around 120 firms last year.

CEO Name

Kim Hong Kyu

Growth stage

Series A

Website

www.lomad.co.kr

Inquiry

official@liche.co.kr

Our Service

LICHE Co. is an IT startup, which developed digital commerce platform called 'LOMAD'.

We introduced fintech solution BNPL(Buy Now, Pay Later) to the premium home furnishing market,

thus helping people buy better quality goods.

LOMAD is a smartphone application platform and sells unique high quality designed goods through BNPL service. We sell only premium level brand goods with their rich history and heritage. Originality and authenticity is our priority. We do not sell low quality or replicated products, thus earning credibility from our customers.

Project status and performance

In March, 2020 after founding the company the application prototype was developed.

Afterwards, LOMAD was introduced in the 1st Incheon Living Design Fair in order to promote LOMAD's brand.

In January, 2021 official LOMAD application was launched in Google Playstore and Apple App Store. At the same time LOMAD started its first digital marketing, entered one of the biggest commerce platform "Today's House" and participated in the Seoul Living Design Fair.

In October, 2021, considering users' experience, official LOMAD web site was launched. At present, LOMAD is selling around 250 products of more than 50 global premium brands.

LOMAD is the first BNPL brand in South Korea, rapidly growing in the market of premium goods.

Moin

We create convenient cross-border remittance through the convergence of technology and finance.

Our Service

MOIN offers cross-border remittance solution which is up to 90% cheaper and 4 times faster than banks.

Currently, it is available in 47 countries including Japan, China, the United States, and Europe, and will expand to Southeast Asia and inbound remittance services in the future.

MOIN's remittance process is very simple, and it is characterized by being able to view exchange rates, remittance fee, and received amount all at once on the application/web.

In addition, MOIN Bizplus, MOIN's B2B remittance platform, allows unlimited remittance and integrated management by registering an invoice.

MOIN brings new convenience to your cross-border remittance experience.

Our Service

TranSafer - KYC Verified Banking Account Deposit/Withdrawal Service
Bonanza Factory's 'TranSafer' solution is a virtual asset business-specific solution that has been prepared for commercialization through the registration of patents in 2019 followed by a large commercial bank and financial regulatory sandbox, and is preparing to open its official service in 2020. The 'TranSafer' solution is a specialized solution that provides deposit and withdrawal services between VASP(virtual asset service provider)s and financial companies. Furthermore, the 'TranSafer' solution contributes to the protection of affiliated VASPs and financial companies through the detection of abnormal transactions (FDS), prevention of money laundering, and blacklisting cooperation between VASPs. The 'TranSafer' solution focuses on 'Deposit Request' behavior rather than on 'Deposit Action' by traditional customers, while providing proactive control and enabling efficient FDS.

Wallet Engine

Wallet Engine is a Singapore-based startup providing apps with the complete e-money stack to offer in-app financial products, including real-time cross-border payments.

Our Service

Our main target customers are businesses that currently lack their own in-app wallet and wish to have their own stable financial infrastructure. As for potential Korean customers, Wallet Engine can help Korean businesses to grow internationally without restricting their in-app payment capabilities to local markets.

Additionally, our product targets apps / digital communities that have users across markets. The problem they are facing is that none of these communities can move money between their users as part of the user experience.

Project status and performance

We have expanded our presence in the Singapore market by activating business licenses in Singapore. We have also activated core infrastructure partners there, which include top-up/withdrawal channels, core banking systems, KYC providers, API providers, and AML and fraud protection services.

As of this year, we have hired 10 key employees and staff members in Singapore. We also have a structured financial plan for 3 years in Singapore, including revenue forecasts and budgeting. We plan on going live with 3 apps by December of 2021 and are leveraging additional partnerships in other countries, such as Indonesia and the Philippines. We are going live with 13 apps from different countries next year, and have a total of 25 foreign apps signed with our services. Additionally, we aim to implement microfinance products to our wallets by November.

μ-Mobility safety and UBI through precision monitoring

Our Service

Precise monitoring service that detects illegal, violent, and even accidents which cannot be detected by GPS.

Through this, driver's safety level is measured by analyzing individual driving habits, and appropriate range of UBI is implemented accordingly.

Riderlog also contributes to safety. In emergency cases, a rescue signal is automatically sent along with location information to prevent casualties (e-Call).

Project status and performance

We are currently collaborating with Delivery Agency Association, Transportation Safety Authority, and the academia to collect precise driving data and study safety solutions.

Moreover, the safety project for personal mobility (motorcycles, four-wheelers, etc.) in areas where public transportation is insufficient (rural and fishing villages) is also under way.

AI Algorithm-Based Tax Return Filing Services

Our Service

In order to address 10 million domestic sole proprietors' concerns about filing tax returns, the "SSEM", an AI algorithm-based tax return filing service, was launched in January 2019.

"SSEM" aims to save taxes for the sole proprietors and establish affordable tax costs, as well as serving as a management assistant for the socially vulnerable self-employed.

More than 20 tax-related services have been launched in Korea. However, "SSEM" is the only mobile app service in which the entire tax process from data collection to support documents review, tax calculation, and filing to the National Tax Service are completely supported.

Currently, only value added tax filing and global income tax filing are available, but it is working on a part-time employees' paycheck filing service and a premium service collaborating with tax accountants. In addition, it is preparing to become a comprehensive finance/management platform for sole proprietors in cooperation with legacy banks and card companies.

Project status and performance

With the slogan "Sole proprietors need to file their tax returns on their own", "SSEM" started its official service in 2019. It has been putting much effort in changing the idea that "Tax filing should be done by tax accountants". Accordingly, it has been downloaded more than 350,000 times as of now (November 2021) in the App Store (Google Play included). Its rating keeps remaining at 4.9(out of 5.0) and it continues to grow more than double every year. Furthermore, partnerships with multiple major banks and card companies have inspired financial companies to realize the value of "SSEM", which is critical to sole proprietors.

Due to the recognition, an investment from the Impact Fund (focused on investments in social enterprises that make the world better) has been secured and additional investments from other organizations are being discussed.

Korea's first 'purpose-based asset management platform' for beginners in asset management

Our Service

The purpose of asset management is to establish goals and plans for movable and real estate in order to achieve personal life management goals, and to acquire, operate, sell and evaluate assets in consideration of the period and purpose of achieving each financial goal. The basic process of asset management consists of setting financial goals, identifying holdings, identifying savings potential, establishing achievement plans, saving and investing, asset allocation, monitoring and supplementing (rebalancing).
 With the launch of 'SAVLE', a savings service app based on fun saving, we help beginners in wealth management, such as new socialites and newlyweds, achieve their financial goals effectively. The goal is to build a wealth-tech platform.

etc

Website

cyberbank.kr

Inquiry

ceo@cyberbank.kr

Our Service

The One-Click Deposit/Savings Split and Management Service enables the easy split of the large deposits in different banks within the amount limit protected by the Depositor Protection Act, focusing on reducing risks and increasing interest income in the low interest rate era. After analyzing the existing deposits and savings, users can separate their principals and interests in a maximum of five banks within the deposit protection limit. Furthermore, users can compare and select diverse deposit and savings products. The One-Click Deposit Split Service enables customers to place their deposits under better conditions with the same risks and also expands deposit amounts flowing into the non-banking sector, which will bring positive effects, vitalizing the local and the low-income economy. Small financial companies can expand deposit amounts, and in an economic crisis, the government can avoid an exacerbated crisis induced by the insolvent small financial companies, which can contribute to preventing the non-banking sector from collapsing.

Our Service

Funble is a platform that simplified securitization of real estate. It allows investors to easily and quickly diversify investment portfolio by providing the opportunities to invest in high-quality real estate, regardless of time, place, and the amount. In recognition of its technological prowess and innovativeness, it was designated as an innovative financial service by the Financial Services Commission in May 2021. By integrating blockchain technology with real estate finance, Funble allows real estate owners to easily sell their assets by utilizing its platform which also allows the owners to meet a wider investor pool. On the other side, real estate investors can experience innovative expansion of alternative investment opportunities by enabling real-time investment in high-quality real estate assets in a form of equity investment, just like how we trade stocks. This was difficult to realize in the existing financial system, due to the laws and regulations. However, as an innovative financial service, Funble is allowed to bypass the current laws and regulations. The major factors that make Funble unique are :

- that Funble is a licensed exchange that anyone can trade real estate backed securities
- that Funble can issue securities backed by real assets
- that the same types of licence is no longer available

Considering the fact that the hype in South Korea's real estate market and the high entry barriers, Funble's platform business seems promising.

Our Service

Korea Financial Solution is an innovative operator designated by the Financial Services Commission and provides a loan comparison service called "Finset N." The loan comparison service "Finset N" is a service that provides loan limit and interest rate information for each financial institution based on your credit information. We compare about 100 financial products with 27 financial institutions. The foreign-only asset management app "Finset Expet" is an app that shows individual assets, consumption, and credit status. It is provided in four languages: Korean, English, Chinese and Vietnamese.

Finset N services can be divided into credit analysis areas and loan execution areas. Credit analysis information is provided by inquiring KCB data, providing health insurance premium payment data, raising one's credit score, and inquiring card/loan/delay details.

The loan comparison service is a service that provides loan limits and interest rates for each financial institution by sending their resident registration number to each financial institution after authentication. In addition, it also has a function to recommend customized products that meet user credit rating scores.

Website
<https://moneypin.biz>

Inquiry
moneypin@howtobiz.com

Our Service

A customized accounting management service for small business owners, MoneyPin reorganizes accounting to convert the tacit knowledge of accounting into a explicit knowledge, configures the explicit knowledge as a selection rather than an input, and automates even the selection to manage accounting without accounting knowledge. Even without accounting knowledge, it is possible to manage accounting and prepare and file books and tax returns. In addition, accounting data is used to help users manage their business and provide insight into the business.

Project status and performance

Since its launch, MoneyPin, the representative service of howtoBizLAB Co., Ltd., has reached 28,000 cumulative subscribers and 12.6 trillion won in accumulated transaction amount. Automated VAT and withholding tax reporting was introduced, resulting in an average savings of 70,000 to 220,000 won compared to home tax. 'MoneyPinPlus', a subscription service, has been showing steady growth every month since its launch in April 2021. In addition, it provides budget management and fixed expenditure management services for customers based on its own accounting engine.

Roborus

Establishment Date
2016.03

CEO Name
DH Kim

Growth stage
Pre Series A

Website
www.roborus.ai

Inquiry
dhkim@roborus.co.kr

Our Service

Among biometric authentication systems, face authentication is the easiest, the most convenient, and sensitive to security. This method is merged with blockchain technology to make forgery impossible and to build and apply a safe, non-centric identity proving system to our company's robot hardware in order to provide individually customized face recognition for payment, point accumulation, and discounts.

Clients do not have to rely on physical means that were hitherto used to pay, such as cards and cell phone, and can pay using only their facial information. One just needs to stand before the terminal with a camera attached to track the face, capture the image, extract the vector value, and send the recognition/authentication information with the sales data to the server.

Project status and performance

- 2021. 08 Selected as a company for SPC-Secta9ine Open Innovation First Group of Proof of Concept (PoC)
- 2021. 05 Selected for an innovative design robot project of the Korean Ministry of Trade, Industry and Energy

Seed

Website

www.enfadvisor.com

Inquiry

enfadvisor@enfadvisor.com

Our Service

Korea's first expert consulting agency that provides investment strategy consulting services for pension funds and related educational programs to institutional investors(or financial companies), utilizing AI-based systems.

- Patent NO. 10-2222928

(Financial projection calculator / Methods and computer programs for financial projection calculation)

Currently, we provide services such as the investment pool plan that binds multiple investors under one strategy, the Outsourced Chief Investment Officer(OCIO) system aiming at certain goals, and measures to implement strategies for general public funds outsourcing.

As an external expert observer, we participate in various committees including institutional investors' asset management committees, and help their decision making.

In addition, we're planning to provide comprehensive consulting services related to institutional investors' asset management, including revised guidelines on institutional investors' asset management, strategic asset allocation measures, outcome analysis on domestic share/bond investment based on multi-factor models, and measures for introducing alternative investment programs.

Project status and performance

"EnF advisor developed a platform that makes the complex plans easy for business owners of public funds and retirement pensions to design on their own."

- Launched KRW 150 million asset management platform services in the KIBO
- Expected to launch platform packages in two credit unions and one fund - The service life of the existing funds and asset management systems is five years and establishment costs are more than KRW 1 billion(plus, yearly maintenance costs are charged). Meanwhile, it costs less than KRW 100 million to establish EnF's asset management package.
- Planning to transform the asset management platform for institutional investors into a cloud-based web service
- Planning to acquire the Independent Financial Advisor License and launch the service
- Developed the BLUE system, a business model that charges fees according to function
- Currently working on attracting investments from foreign investors

infoplus

Financial Service Provider of BaaS (Bank-as-a-Service)

Our Service

It provides various financial IT infrastructure systems and solutions so that financial companies and companies in Southeast Asia, where the financial IT infrastructure environment is poor, such as Vietnam, Cambodia, Laos, and Myanmar, can use digitalized finance.

Currently, InfoPlus is providing 13 financial solutions developed in-house to Southeast Asian countries including Vietnam through API platform.

Project status and performance

Established InfoPlus Vietnam in 2018 (No. of employees: 8, sales of KRW 1.5 billion)

Stabilization of local business and securing references in 2019

(No. of employees: 15, sales of KRW 2.5 billion)

Established InfoPlus Korea (headquarters) in 2020

(No. of employees: 40, sales of KRW 4 billion)

Attracting investment in 2021 Pre SeriesA round (Value 10 billion KRW)

(No. of employees: 70, sales KRW 8.5 billion)

* Common: All sales are local sales in Vietnam, and more than 80% of our employees are locals.

InfoPlus utilizes corporate and individual financial activity data secured through infoAPI, which provides API finance solutions to finance and companies, infoERP, an ERP solution for tax and accounting firms, and infoCITY, an integrated solution for storage and building management of buildings/apartments. We are planning to provide new fintech financial products and services.
